

FYnesse[®] FORTIFY[®]•Cu

THE COPPER PLATED TECHNOLOGY

THE COPPER TECHNOLOGY

Fiber & Yarn Products Inc. now offers yarn that is literally 'plated' with copper technology, allowing your knit or woven goods to share in the benefits that copper can offer while maintaining a simple and efficient manufacturing process.

FYnesse[®] Fortify[®] Cu is made with copper, a naturally occurring element.

Why copper? The element copper is one of a relatively small group of metallic elements which are essential to human health. Copper itself plays an important role in the appearance of healthy skin, and therefore is a crucial element for maintaining skin health.

How our product works? As the **FYnesse[®] Fortify[®] Cu** fiber wears from normal usage the technology in the fiber will regenerate new ions so your product maintains its excellent potential for copper ion release, thereby providing long term durability and features.

When is our product most effective? With **FYnesse[®] Fortify[®] Cu**, the more moisture in the environment the more effective the technology becomes. So the more perspiration in close proximity, or humid the environment the more likely that ion release will occur. This helps to create a time release effect for the fabric.

Why choose **FYnesse[®] Fortify[®] Cu**? Unlike other copper containing yarns that may have entered the market in the past, careful study and attention to detail have been essential parts of our development process. It has been specifically designed by experienced and knowledgeable yarn professionals to excel where the previous products failed. The importance of offering a product that textile people can actually use was not lost in the F&YP development process.

Advantages & Flexibility of usage: **FYnesse[®] Fortify[®] Cu** is available in a variety of colors including whites, a wide variety of denier and filament counts; both Nylon and Polyester. Perhaps most importantly, this technology offers excellent knit-ability with unmatched batch to batch consistency.
